

**IT IS enbex solves the electronic data exchange (EDI / XML) between various business systems (e.g. NAV / SAP)**

# **Information Brochure**

## **IT IS enbex passes into hands: your important data is in the right place at the right time now.**

In the daily business of a company, there is a remarkable amount of data to be processed. Above all, documents like invoices, quotes, orders, bills of delivery, but forms and regular correspondence are just common practice.

To handle these quantities of data and to carry them from hardcopy form into your EDV-system, means a time-consuming but still non-productive job for many enterprises, because the electronic data often already exists elsewhere and just needs to be checked and taken over - wouldn't this save enormous time. With IT IS enbex, that wish becomes reality. Directly used data from different associated systems and use them for your own purpose, always with a maximum technical security, of course.

The longsome transportation of hardcopy documents and the correction of entries is very time-consuming. With IT IS enbex this expenditure dispenses. Furthermore you don't have to be concerned, if your "counterpart" can directly process your data without any difficulties, because the transmitted IT IS enbex documents represent a standard which is understood by all participants or could be translated. Since the steering board to the data exchange is presented in your business software or in a browser, IT IS enbex is very user friendly.

**IT IS enbex is a .NET based communication system. It enables electronic data exchange in the B2B area and acts as gateway for various IT systems. IT IS enbex is the inexpensive flatrate, because the cost does not depend on the number of transmissions.**

**Want some figures? IT IS enbex has done more than 550.000 transactions Today there are over 1000 satisfied IT IS enbex-user, and counting.**

## **IT IS enbex is standard-conformity paired with maximum flexibility**

During the development of IT IS enbex we paid attention to the possibility of enabling an easy and flexible data exchange between various IT-systems.

Using IT IS enbex, the communication system for electronic data exchange, we are the outlier of a Germany-, even Europe-wide unique solution which simplifies the document exchange.

IT IS enbex acts as interface for various IT-systems, therefore this system has the attribute of universal applicability.

IT IS enbex enables the qualified digital signature. Furthermore the point to point technique ensures maximum security at each transmission.

**Dietmar Schulz:** IT-administrator of the Jörg Aulfinger GmbH & Co. KG

IT IS enbex is flexible enough to cope with future demands and enlargements.

The advantage of such an universal system is, that all of the connected entities use one common “language” towards

the other entities. This ensures that each partner, which is participating the data exchange and using IT IS enbex is able to “understand” each of the other participants without any difficulties.

It is possible to adapt IT IS enbex to the customer's requests: Interfaces for individual software solutions can be integrated. Because of this flexibility, IT IS enbex is standing out from other systems.

## **IT IS enbex offers secure communication and data exchange**

Another very important point is the security of the communication. This means, that mechanisms, which acknowledge the receipt of every document, are integrated into IT IS enbex. Verifications of authenticity, high encoding and a qualified signature are also included.

## **IT IS enbex: less mistakes means less costs**

Efficient operations are worthwhile to archive for good reason: The colleagues always exactly know what has to be done and do not have to consider any complex handling of singular cases or exceptional rules. So the members of

staff can concentrate on their major tasks. But what can information technology do for that? With the aid of data processing especially the quality of the data is improved: Avoid mistakes of writing or wrong filled forms, because the right values are available already.

IT IS enbex is very conducive here and as consequence is leading to a lowering of costs because wrong entries and redundant acquisition of data are avoided. The members of staff use and send the structured data, which is already filled, to their colleagues. Thereby, a lot of transcribing actions become actions of examination.

So the speed of processing the data is rising while there are less mistakes. Practical experiences show, that the quality of data increases about 800% through electronic data exchange. This modern way of information exchange will shortly make a contribution to alleviate the professional life of the personnel.

### **Digital signature and encoding for maximum security**

The communication system of IT IS enbex is based on XML (Extensible Markup Language), an international standard for the creation of machine- and human-readable documents in terms of a extendable tree structure.

Very important: during the development of IT IS enbex we strictly adhered to the recommendations and restrictions of W3C (world wide web consortium). Thereby, the system is very flexible and can be adapted to future requirements. By using XML the preferences of flexibility and conformance are united with international internet-standards.

Furthermore IT IS enbex already provides digital signature, so that the identity of each particular participant and the derivation of the data is secured.

IT IS enbex continues to be very secure: high encoding and decentralized data exchange (point-to-point transmission) ensures data security at each transmission, so your data will never be in the hands of unauthorized persons.

Together with an business software like Microsoft Dynamics NAV, it is possible to reach a paperless and secure exchange of business documents; thereby, IT IS enbex virtually suits every other standard software.

IT IS enbex delivers the data, which already is existing in your system, in a fast and secure way to the desired communication partner. The re-entry into internet formulars or the filling in a form completely drops.

Especially coordination processes with your partners are extremely time saving now. Just like you were sending an e-mail, but secure and directly, it is possible to transfer data per the push of a button, even during you discuss about the data with your partner.

Your dialogue partner achieves the qualified data in no time at all exactly where he needs it in his system and immediately is able to check, approve and redirect your changes to the next partner.

From this point, the extended dataset is either rebuilt, transferred or is sent back to the former partner. So, at the end of the process, every partner has the complete and correct data in his system.

IT IS enbex is fully configurable, supports workflows, communicates with all kind of protocols and transmission channels (e.g. HTTP/S, SMTP, FTP) using EDI, XML, and Flat file Data. You can learn more about the technical details on our home page.

**Profit from the advantages of IT IS enbex within no time at all. The plug & play-appliance immediately is ready for use and is available for all functions in the range of communication with IT IS enbex.**

## IT IS enbex: the standard for the fast and secure exchange of data and business documents for enterprises
